DATA READINESS VERDICT

Can you trust the data your AI pilot runs on?

In six weeks we profile real extracts from every system one AI use case depends on, grade each A to F, and give you a written verdict: go, fix then go, or no-go.

6 weeks
from data access to verdict

5 · 10 · 15
source systems in scope

A–F
grades on five dimensions

From $75K
fixed fee, scoped up front

WHAT YOU GET

The verdict
Go, fix then go, or no-go, in writing, on one page.
So leadership can make the call on evidence, not optimism.

Data Foundation Report Card
Every source system graded A–F on five dimensions.
So you see at a glance which systems can carry AI.

Ranked fix list
Each gap ranked by impact on your AI use case.
So the first dollar goes to what blocks the use case.

Four-horizon roadmap
0–90 days, 3–6 months, 6–12 months, 12+ months.
So fixes are sequenced, not a multi-year program.

HOW THE SIX WEEKS RUN

Weeks 1–3 — **1 · Scope**
12–20 one-hour interviews with the people who run each system. So we grade only the systems your use case touches.

Weeks 3–5 — **2 · Grade**
Profiled, not surveyed: real extracts, inside your environment, graded A–F.

Week 6 — **3 · Decide**
The written verdict and everything behind it, presented to leadership.

THE FIVE GRADES

Data quality	Are the values right, and does anyone measure it?
Documentation	Is what each field means written down?
Lineage	Can each number be traced to its source?
Access & security	Can the right people reach it, quickly and safely?
AI consumability	Can a model read it when it decides?

A–B ready · C remediate · D–F blocks AI

Weighted to your AI use case: an F on its path outranks a bigger gap elsewhere.

WHAT WE NEED FROM YOU

- An executive sponsor and the AI use case you're being asked to deliver
- Read-only data access for the systems in scope
- 12–20 people for an hour each, across weeks 1–3
- Your NDA and vendor security review (we carry E&O and cyber insurance)

Principal-led, with specialist support as needed. Profiling runs inside your environment by default. Fully remote; the read-out can be on site.

HOW IT COMPARES

	EMERALD ISLE	TYPICAL SURVEY
Evidence	**Real extracts, profiled**	Interviews, questionnaires
Output	**A written verdict on one use case**	Enterprise maturity scores
Fee	**From $75K, fixed up front**	Often hourly

Map your AI pilot, or request a fixed-fee scope.

The free map takes three minutes and shows which systems your pilot depends on.
