02 · THE REPORT CARD

Data Foundation Report Card

Every system the use case depends on, graded A–F on five dimensions and weighted toward the funded use case. The ringed grade is where the FNOL triage pilot fails.

System	Data Quality	Documentation	Lineage	Access & Security	AI Consumability	Overall
ClaimsCore	B	D	D	B	D	C
PolicyCore	D	D	D	C	D	D
FNOL Intake	C	F	D	C	F	D
ACORD Gateway	B	D	C	B	C	B-
EDW	C	C	D	B	C	C+

A–B ready · C remediate · D–F blocks AI

WHAT EACH DIMENSION ASKS

Data Quality
Are the values right, and is quality measured?

Documentation
Is what each field means written down?

Lineage
Can each number be traced to its source?

Access & Security
Can the right people reach the data, quickly and safely?

AI Consumability
Can a model read the data when it needs to?

How grades are set. Weeks 1–3: interviews with data, IT and business leads, and every in-scope system mapped to the AI use case. Weeks 3–5: profiling on real extracts, scored against one rubric. Every grade cites its evidence (pages 5–6).
